

## Soft Surfaces Colour Range

We can incorporate contrasting colours in to the wet pour surface finish.

Here are some examples of the colours we offer that can be installed in the surface either as a feature or to complete a wetpour design, these are just standard colour range and other colours and mixes are available upon request. Our Advice is free and we will be only too happy to talk you through the various options and considerations for your scheme.

The use of MDI polyurethane binder may affect the finish colour, in certain circumstances when combined with light coloured and blue based EPDM. Any discoloration will diminish with exposure to strong sunlight, we are happy to advise further should you have any questions or [click here](#).

We can also produce a design for your surface should you so wish.

PLEASE NOTE: Colour's shown are for reference & illustration purposes only. Laid product may vary. Please call to discuss further.
