

# SOFT SURFACES

## Resin Bound Stone

Resin Bound Stone Surfacing is a blended mixture of natural aggregates with a Polyurethane resin mixed onsite and laid in-situ.

The system can overlay existing surfaces such as tarmac, concrete and other stable substrates and is also ideal for new build projects.

Resin Bound Stone is not to be confused with 'Bonded' and is also known within the UK as resin bound gravel flooring or gravel bound surfaces and is a great decorative system with no loose stones trowelled completely smooth which is an ideal surfacing finish for:

- Pathways and footpaths
- Patios / Sitting Areas
- Domestic Driveways
- Hot tub / Pool surrounds
- Tree Pit surrounds
- Cycle Roads
- Pedestrian walkways
- Stadium Pitch Surround
- Office building surrounds

The dimension from the top of the edge to sub base, MUST NOT be greater than the depth of the wet pour surfacing ordered.
