

### Commercial: Anfield, Liverpool

**Year:** 2017

**Site :** Anfield , Liverpool

**Type:** Decorative Surfacing

**Surfacing Installed:** Resin Bound Gravel

**Contractor:** Hawkspear Contracts Ltd

Work was completed in the area surrounding the club's retail store which features exclusive products and a café. There is a large pedestrian space at the front of the store and around the perimeter. The club needed a strong, long-lasting and porous paving type to cover the area. Resin bound gravel offers all of these qualities and is also low maintenance so it seemed the perfect choice for this project.

#### Resin Bound Gravel Products

Our installers laid around 4000m<sup>2</sup> of the Addagrip Terrabound surface in a number of colours to create an attractive design. The colours were also chosen to match the same type of paving which had been installed to the main stand at Liverpool FC in 2016. The client chose to have a blend of 6mm Rhine Gold and 6mm Tuscan Pebble in some areas, along with 6mm Lucerne Silver in others. This created a contrasting colour design to guide fans around the area on match days. As well as the large pedestrian space, there were also a number of newly planted trees which required perimeter surfacing. To complete this, our team laid 244m<sup>2</sup> of tree pits using the Addastone TP in Silver Grey aggregate at a depth of 75mm. We also backfilled the tree collars with loose aggregate to allow for further growth.
